#### ⊸ Three Major Pros of DeepSeek ∽

High Performance

Comparable to OpenAl ol

Low Cost

Over 20 times lower than o1's

Developer-Friendly

Compatible with OpenAl's API format

CNY USD						
模型 <sup>(1)</sup>	上下文长度	最大思维链长度(2)	最大输出长度(3)	百万tokens 输入价格 (缓存命中) <sup>(4)</sup>	百万tokens 输入价格 (缓存未命中)	百万tokens 输出价格 输出价格
deepseek-chat	64K	-	8K	0.5元	2元	8元
deepseek-reasoner	64K	32K	8K	1元	4元	16元(5)

## Five Key Decision Factors for Deploying DeepSeek

Long-term High Frequency Frequency of Use Local, Cloud Hosting Requirement of Response Ultra-low Latency Edge Computing Latency No Ops Team Computing & Technical API, Cloud Hosting Resource Sensitive Data Data Sensitivity Assessment Local, Private Cloud High Compliance Local Deployment + Security Compliance Requirements Audit

- Three Common Ways for Developers to Deploy DeepSeek
  - > Official API Use
  - ➤ Local Private Deployment
  - Cloud Hosting Deployment
- Other Ways for Deploying DeepSeek

## Three Common Ways to Deploy DeepSeek for Developers

Three common ways for deploying DeepSeek, with how to get started:

Official API

Local Private Deployment

Cloud Hosting Deployment

Pros: Zero Ops cost,
pay-as-you-go

**Cons**: Higher network latency

**Pros:** Data security, highly customizable

Cons: Requires GPU
resources, manual Ops

Pros: Elastic scaling,
hybrid cloud support

Cons: Dependence on Cloud providers & cross-cloud management

Before using the DeepSeek API, please create an API key first.

https://api-docs.deepseek.com/zh-cn/api/deepseek-api

After creating the API key, you can use the following sample Python script to access the DeepSeek API.

#### Official API Use: Key Parameters

Invoking DeepSeek-V3

Parameters are set to 1.0 by default, recommended to configure based on scenarios.

Invoking Deepseek-R1

Default maximum output length is 4K, adjustable manually to 8K

场景	温度
代码生成/数学解题	0.0
数据抽取/分析	1.0
通用对话	1.3
翻译	1.3
创意类写作/诗歌创作	1.5

Source: DeepSeek Official

## Official API Usage: Common Errors and Solutions

400 - Format Error

Modify the request → body according to the error message

429 - Rate Limit Exceeded

Reasonably plan your request rate

401 - Authentication Failed

Check if the API key is correct

500 - Server Error

Retry later or contact the official support

402 - Insufficient Balance

Confirm your

→ balance and
recharge promptly

503 - Server Busy

Retry later

422 - Parameter Error

Modify relevantparameters based on the error message

#### - Local Private Deployment (1)

Locally deploy the distilled version of DeepSeek-R1, simplifying the deployment process through tools like Ollama, vLLM, etc.

The following tutorial uses Ollama as an example. Ollama download link: https://ollama.com/download

#### 1. Download Ollama

# Download Ollama Linux Windows Download for Windows Requires Windows 10 or later

Source: Ollama Official

#### 2. Open the model list and download DeepSeek R1

Visit https://ollama.com/library/deepseek-r1 to select a model with the appropriate amount of parameters

omparable p	erformance to	of reasoning mod OpenAl-o1, included DeepSeek-R1 bas	ding six	
	① Updated 3 da		ollama run deepseek-r1	Ō
1.5b	1.1GI		(1000 to 1000	
			Ua8c2669	1023 · 4.7GB
7b	4.7GI	3		
7b		arameters 7.62B	· quantization Q4_K_M	4.7GB
	4.7Gl 4.9Gl 9.0Gl	arameters 7.62B	<pre>- quantization Q4_K_M  cence   &gt;", "&lt;  end_of_sentence   &gt;</pre>	4.7GB 148B
7b 8b	4.9GI	arameters 7.62B		
7b 8b 14b	4.9Gl	arameters <b>7.62B</b> begin_of_sent  }{{ .System }}	rence   >", "<   end_of_sentence   >	148B

#### Local Private Deployment (2)

#### 3. Setup the downloaded model

Open your local command prompt and enter the following command (taking the 7B model as an example)

#### ollama pull deepseek-r1:7b

Use the ollama list command to view the storage space occupied by all local models

C:\Users\EDY>ollama list

TD SIZE MODIFIED deepseek-r1:7b 4.7 GB 0a8c26691023 3 days ago

- 1. https://mp.weixin.ga.com/s/iKfE67M42ROWVCMTe6wbFA
- 2. https://mp.weixin.gg.com/s/GQ7timJsLr2IddOraD-wKg

4. Enter the run command to initiate a dialogue with R1

#### C:\Users\EDY>ollama run deepseek-r1:7b

#### Output:

证明1+2大于2

恩,证明"1加2大于2",听起来有点奇怪,因为1+2等于3,而3当然大于2啊!不过可能题目表达有点问题,或者是想让我用某种特殊的方式来看待这个问题?

f先,1加2等于3。3确实比2大。这是基本的数学事实,没有争议。

也许,用户想问的是"为什么1加2大于2",或者是不是在某种不同的情况下?比如,在某些特定的定义下,或者说是在某种特殊的系统中,"大于"可能有不同的意义?

另外,也有可能是"证明1+2>2",这是一种不等式。让我尝试从数学的角度来分析一下。

首先, 我们可以写出来: 1 + 2 = 3

然后比较3和2的大小:

因为3 > 2,

所以,1+2>2

这是不是太直接了呢?可能需要更深入地解释一下为什么"大于"是这样的关系,或者有没有什么隐藏的条件?

比如,在数学中,"大于"是一个基本的概念,表示左边的数在数值上更大。在这个例子里,3确实比2大,所以1加2大于2。

也许还有其他角度可以探讨这个问题?比如说,在不同的数域中,或者结合某些运算规则的情况下,结果会不会有所不同呢?

#### Cloud Hosting Deployment (1)

Currently, mainstream domestic cloud platforms all support the DeepSeek model, such as SiliconFlow x Huawei Cloud, Tencent Cloud, Baidu Al Cloud, etc.

The following tutorial uses SiliconFlow as an example. Address:

https://cloud.siliconflow.cn/i/adxzw8w3af

#### 1. Register and log in to the cloud platform

+86 ∨	您的手机号	
短信验证	码获取验	<b>並证码</b>
dcAlgVea	1	6
dcAlgVea		

Source: SiliconFlow Official

#### 2. Create a new API key

Navigate to API Keys in the left sidebar and click Create

API密钥 是您访问 Silicon	Cloud 接口的凭证,具有该账户的完整权限	. 请您妥善保管。	
100000	新建密钥		×
	密钥描述		
Ø 密钥(点击复制)	请输入描述信息		间
	关于密钥用途等的补充说明		
		取消	建密钥
		暂无数据	

#### 3. Download Al development tools

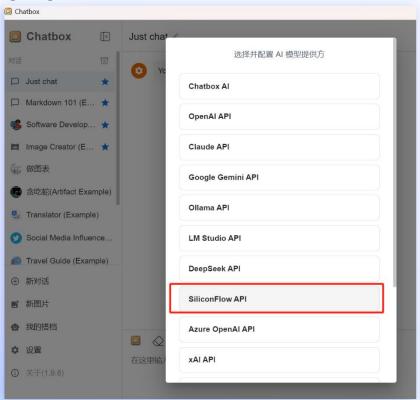

Download Cherry Studio or Chatbox Al The tutorial uses Chatbox Al as an example. Address: <a href="https://chatboxai.app/">https://chatboxai.app/</a>

Source: Chatbox AI

4. Install the development tool and select the model provider

Select the API you are using. SiliconFlow is highlighted in the red box below.

#### Cloud Hosting Deployment (3)

5. Enter your API key and select the model

6. Initiate a dialogue with R1

→ Thinking ↑

□ Thinking ↑
□ R. 用户想要一个10天的学习计划来学习DeepSeek。首先,我需要确定DeepSeek具体指的是什么,可能是一个框架、工具还是平台?根据之前的模型信息,DeepSeek-R1是一个AI模型,可能用户指的是如何学习使用或开发相关的技术。

首先,用户的身份可能是开发者,想学习如何应用或集成DeepSeek到自己的项目中。用户的需求是定制一个10天的计划,所以需要结构化的内容,分阶段进行。可能需要覆盖基础知识、API使用、实际项目集成、优化等。

用户可能没有明确说明他们的现有水平,但作为开发者,可能具备编程基础,尤其是Python。需要从基础开始,逐步深入。同时,用户可能希望有实践环节,每天安排实操任务,比如安装、调用API、构建应用等。

另外,用户可能希望计划不仅仅是理论,还包括实际应用和项目,这样他们能够看到成果,保持学习的动力。需要确保每天的学习目标明确,时间安排合理,不会过于紧张但又有挑战性。

还需要考虑资源获取,比如文档、GitHub仓库、社区支持等。可能需要在计划中推荐相关资源,帮助用户自主学习。此外,错误处理和性能优化也是开发者关心的点,应该包含在后期阶段。

最后,总结和项目复盘也很重要,帮助用户巩固所学,并规划下一步的学习路径。需要确保整个计划循序渐进,覆盖必要的知识点,同时保持实用性。

#### Other Ways to Deploy DeepSeek ∽

Three advanced methods for deploying DeepSeek, briefly introduced as follows:

#### Edge Deployment

Deploy lightweight models on edge nodes close to data sources

Pros: Ultra-low latency, operational during network outages

Cons: Models need distillation, edge hardware compatibility

#### Containerized Microservices **Deployment**

Build a microservices cluster for models using Docker/Kubernetes

Pros: Resource isolation, grav release

Cons: Requires K8s Ops skills

#### Hybrid Architecture Deployment

Combine multiple deployment ways

Pros: Balances security and cost. more flexible

Cons: Higher complexity in architecture design

- Basic assisted development functions
  - Code rewriting
  - Code explanation
  - Code generation
  - Practical integration tools

## Assisted Development Example 1: Code Rewriting

Modify code to correct errors, add comments, debug, etc.

#### **Prompts**

The following code is inefficient and does not handle edge cases. Please explain the issues and solutions, then optimize it:

```
def fib(n):
    if n <= 2:
        return n
    return fib(n-1) + fib(n-2)</pre>
```

This and following images are sourced from DeepSeek Official

#### Sample Output

#### ### 问题分析

这段代码实现了一个递归的斐波那契数列计算函数 `fib(n)`。虽然代码简洁,但它存在以下几个问题:

- 1. \*\*重复计算\*\*: 递归调用会导致大量的重复计算。例如,计算 `fib(5)` 时, `fib(3)` 和 `fib(2)` 会被多次计算,导致效率低下。
- 2. \*\*边界情况处理不完善\*\*: 虽然代码中处理了 `n <= 2` 的情况,但没有处理 `n < 0` 的情况。对于负数输入,函数会返回不正确的结果。
- 3. \*\*递归深度限制\*\*: 对于较大的 `n`,递归深度可能会超过 Python 的默认递归深度限制,导致 `RecursionError`。

#### ### 解决方法

- 1. \*\*使用记忆化(Memoization) \*\*: 通过缓存已经计算过的斐波那契数列值,避免重复计算,提高效率。
- 2. \*\*处理边界情况\*\*: 增加对 `n < 0` 的检查,并返回适当的错误信息或默认值。
- 3. \*\*使用迭代代替递归\*\*: 递归虽然简洁,但在处理大规模数据时效率较低。可以使用迭代方法来计算斐波那契数列,避免递归深度限制。

#### ### 优化后的代码

#### #### 方法一:记忆化递归

```
'``python
def fib(n, memo={}):
    if n < 0:
        raise ValueError("Input must be a non-negative integer")
    if n <= 2:
        return 1
    if n in memo:</pre>
```

## Assisted Development Example 2: Code Explanation

Explain the code for better understanding.

#### Prompts

Please explain the logic of the following code and describe its functionality:

```
// weight数组的大小 就是物品个数
for(int i = 1; i < weight.size(); i++) { // 遍历物品
    for(int j = 0; j <= bagweight; j++) { // 遍历背包容量
        if (j < weight[i]) dp[i][j] = dp[i - 1][j];
        else dp[i][j] = max(dp[i - 1][j], dp[i - 1][j - weight[i]] + value[i]);
    }
}
```

#### Sample Outputs

```
这段代码实现了一个经典的动态规划问题,通常用于解决"0/1背包问题"。下面是对代码逻辑的详细解释:
### 代码逻辑解释
1. **初始化与遍历**:
  - `weight` 数组表示每个物品的重量。
  - `value` 数组表示每个物品的价值。
  - `bagweight` 表示背包的最大容量。
  - `dp` 是一个二维数组,`dp[i][j]` 表示前 `i` 个物品在背包容量为 `j` 时的最大价值。
2. **外层循环**:
  ```cpp
  for(int i = 1; i < weight.size(); i++) { // 遍历物品
  - 外层循环从第1个物品开始遍历到最后一个物品(`weight.size()`)。
3. **内层循环**:
  ```cpp
  for(int j = 0; j <= bagweight; j++) { // 遍历背包容量
  - 内层循环从背包容量为0开始遍历到背包的最大容量(`bagweight`)。
```

## Assisted Development Example 3: Code Generation (1)

To generate code that fulfills a specific function.

#### **Prompts**

Please generate code in xx programming language to achieve the purpose of xx:

Example: Please help me create a Gomoku game in HTML, with all code contained in a single HTML file.

#### Sample Outputs

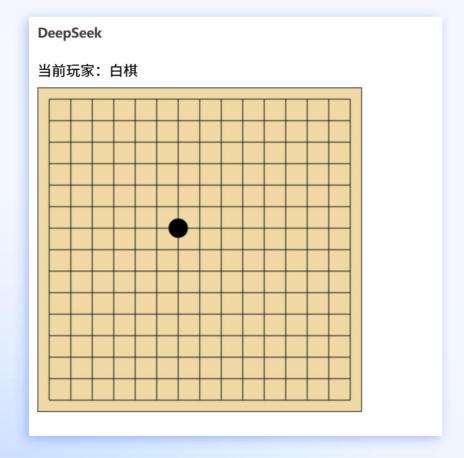

```
当然!下面是一个简单的五子棋游戏的 HTML 代码。这个代码包含了一个基本的五子棋棋盘,玩家可以通过点击棋盘上的格子来下棋。游戏会检测是否有玩家获胜
```html
<!DOCTYPE html>
<html lang="zh-CN">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>五子棋游戏</title>
    <style>
       body {
           display: flex;
           justify-content: center;
           align-items: center;
           height: 100vh;
           background-color: #f0f0f0;
           font-family: Arial, sans-serif;
       #board {
           display: grid;
           grid-template-columns: repeat(15, 30px);
           grid-template-rows: repeat(15, 30px);
           gap: 1px;
           background-color: #d18b47;
           padding: 10px;
           border-radius: 5px;
```

#### Assisted Development Example 3: Code Generation (2)

Run the generated code:

```
html
               boardData[y][x] = currentPlayer;
               drawPiece(x, y, currentPlayer);
               if (checkWin(x, y)) {
                  setTimeout(() => {
                       alert(`${currentPlayer === 1 ? '黑棋' : '臼棋'}获胜! `);
                       boardData = Array(BOARD_SIZE).fill().map(() => Array(BOARD_SIZE).fill
(0));
                       initBoard();
                   }, 10);
               currentPlayer = currentPlayer === 1 ? 2 : 1;
               status.textContent = `当前玩家: ${currentPlayer === 1 ? '黑棋' : '白棋'}`;
       });
       // 初始化游戏
       initBoard();
   </script>
</body>
</html>
   ▶ 运行 HTML
```

#### Gomoku Game Showcase

## Assisted Development Example 4: Practical Integration Tools

The following frameworks have integrated the DeepSeek API, helping simplify the development process and enhance efficiency.

#### Al Agent Frameworks

Alice

一个基于 ICP 的自主 AI 代理,利用 DeepSeek 等大型语言模型进行链上决策。Alice 结合实时数据分析和独特的个性,管理代币、挖掘 BOB 并参与生态系统治理。

#### RAG Frameworks

RAGFlow

一款基于深度文档理解构建的开源 RAG(Retrieval-Augmented Generation)引擎。RAGFlow 可以为各种规模的企业及个人提供一套精简的 RAG 工作流程,结合大语言模型(LLM)针对用户各类不同的复杂格式数据提供可靠的问答以及有理有据的引用。

#### Solana Frameworks

Solana Agent Kit 一个用于连接 AI 智能体到 Solana 协议的开源工具包。现在,任何使用 Deepseek LLM 的智能体都可以自主执行 60+ 种 Solana 操作:

#### Appendix: Applications Integrated with DeepSeek (Partial)

Source: DeepSeek Official

	Chatbox	一个支持多种流行LLM模型的桌面客户端,可在 Windows、Mac 和 Linux 上使用
\$	ChatGPT-Next- Web	一键获取跨平台ChatGPT网页用户界面,支持流行的LLM
	留白记事	留白让你直接在微信上使用 DeepSeek 管理你的笔记、任务、日程和待办清单!
<b>9</b> 2	Pal - Al Chat Client (iOS, ipadOS)	一款可以在 iPhone 或 iPad 上使用的 AI 助手
9	LibreChat	LibreChat 是一个可定制的开源应用程序,无缝集成了 DeepSeek,以增强人工智能交互体验
	PapersGPT	PapersGPT是一款集成了DeepSeek及其他多种AI模型的辅助论文阅读的Zotero插件.
R	RSS翻译器	开源、简洁、可自部署的RSS翻译器
0	Enconvo	Enconvo是AI时代的启动器,是所有AI功能的入口,也是一位体贴的智能助理.
જ	Cherry Studio	一款为创造者而生的桌面版 AI 助手
×	ToMemo (iOS, ipadOS)	一款短语合集 + 剪切板历史 + 键盘输出的iOS应用,集成了AI大模型,可以在键盘中快速输出使用。
<b>(</b>	Video Subtitle Master	批量为视频生成字幕,并可将字幕翻译成其它语言。这是一个客户端工具, 跨平台支持 mac 和 windows 系统, 支持百度,火山,deeplx, openai, deepseek, ollama 等多个翻译服务
